Group number: 2

Topic: The effect of income composition of resources and GDP on life expectancy

Description:

- In this report, we will examine how a country's utilization of its resources (income composition of resources) and GDP could be a factor in improving people's life expectancy. In other words, would these specific factors help increase or decrease the period that a person may expect to live?
- Income composition of resources and GDP are 2 independent variables
- The life expectancy of citizens is the dependent variable

How to collect the data:

- We will use the dataset obtained from Kaggle website:
<https://www.kaggle.com/datasets/kumarajarshi/life-expectancy-who>

The computer program used for the project:

- Python
